CLP Green Building Symposium Lays Foundations for a Greener Future

CLP Power Hong Kong Limited (CLP Power) today hosted its third Green Building Symposium, inviting various corporates with successful green building performance to share ideas and initiatives on how to make Hong Kong buildings more energy efficient. Over 300 participants from various business sectors and representatives from the building industry took part in the symposium. CLP Power also took the opportunity to introduce the latest technologies including the introduction of the Meter Online upgrade service and Energy Modelling that improve energy efficiency.

As a densely populated cosmopolitan, buildings account for some 90 per cent of Hong Kong's total electricity use and air conditioning accounts for nearly one third of that consumption. As such, CLP has been committed to support the government to implement its Energy Saving Plan for Hong Kong's Built Environment, to promote environmental protection and energy conservation to the business customers as well as the general public.

The theme for this year's symposium was *Energy-Wise Buildings for a Greener Future*. Industry experts from Link Asset Management Limited, the University of Science and Technology, NTT Com Asia Limited and West Kowloon Cultural District Authority were invited to share their experiences on how to make the building more energy efficient.

CLP Power also introduced the latest released Meter Online 3.0 upgrade service. It makes use of district specific and hourly weather forecast from the Hong Kong Observatory as well as hourly load profile data, to help business customers predict their daily maximum electricity demand more accurately. With the help of the new function, customers are better able to manage their energy use and demand, allowing them to adjust or reschedule the operation of equipment at times of peak demand to achieve greater energy efficiency. Some 2,100 customers have already signed up for the Meter Online service.

CLP Power Vice Chairman Mrs Betty Yuen told guests, "This is the third year CLP Power has hosted the Green Building Symposium, which has received wholehearted support from customers and industry experts since its launch. We are delighted to see how the symposiums have raised awareness of energy saving and the way in which business customers have committed more resources and effort to manage the energy consumption of their buildings.

"CLP Power will continue to act as energy saving partner of our customers, leverage our power expertise to work with different business sectors to promote energy saving in the city."

The Secretary for the Environment, Mr Wong Kam-sing, who was the guest of honour at today's event, said, "The Government has all along been promoting energy efficiency and carbon emission

reduction. In May this year, the Environment Bureau released the Energy Saving Plan for Hong Kong's Built Environment 2015~2025+ with the target of reducing energy intensity by 40% between 2015 to 2025. We need the participation and collaboration by the public sector, commercial and business sectors as well as the community as a whole so as to achieve energy saving for all.”

Special booths were set up at today's event to showcase the latest energy saving technologies and solutions including the heating, ventilation and air-conditioning system, energy management system, electric vehicle chargers, solar panels and the Meter Online 3.0 service to encourage participants to take advantage of them for their businesses.

About CLP Power Hong Kong Limited

CLP Power Hong Kong Limited (“CLP Power”) is the Hong Kong utility subsidiary wholly owned by CLP Holdings Limited, a company listed on the Hong Kong Stock Exchange and one of the largest investor-owned power businesses in Asia. CLP Power operates a vertically integrated electricity supply business in Hong Kong, and provides a highly reliable supply of electricity and excellent customer service to 5.9 million people in its supply area.
