Power Restoration Arrangements Following Super Typhoon Ragasa

As Super Typhoon Ragasa gradually weakens, engineering staff from CLP Power Hong Kong Limited (CLP Power) are working at full speed to carry out emergency repairs and restore power supply to customers affected by the typhoon. Subject to weather and safety conditions, CLP Power aims to restore power supply to most affected customers by midnight today (24 September).

In preparation for Super Typhoon Ragasa, CLP Power has implemented a series of precautionary measures to closely monitor potential impacts on the power systems and ensure reliable power supply. When Ragasa hit Hong Kong, our generation and power systems remained intact and operated normally in general. However, some of our overhead lines and power equipment were affected by strong winds and fallen trees, causing power interruptions to some customers.

As of 6pm today, power supply to around 1,350 customers remained affected, mainly in Yuen Long, North District, and Sai Kung. Some affected customers are located in remote areas, and road access has been blocked by fallen trees and other obstacles. In certain cases, waterborne transport is required to reach these locations, which has made restoration more difficult. Due to unstable weather conditions and the need for engineering staff to carry out overhead line repairs at night, restoration is expected to take longer.

To expedite full power supply restoration, CLP Power has dispatched engineering staff to assess conditions across affected areas. Frontline engineering staff are working in close coordination with our System Control Centre, Command Centres, and Emergency Service Hotline Centre. Additional manpower has been mobilised to support post-typhoon repair and restoration efforts, subject to safety and environmental conditions.

Given the complexity of some repair and restoration works, CLP Power will continue to maintain close communications with relevant Government departments, District

Offices, Care Teams, and Rural Committees, property management companies, and major customers to ensure smooth coordination during power restoration.

CLP Power would like to express our sincere appreciation to our customers for their patience and understanding, and to other community stakeholders for their full support. We would also like to extend our gratitude to all engineering staff for demonstrating their professionalism and care for the community throughout the restoration process.
