CLP Power Strengthens Support for Retro-commissioning From Training to Practice, Helping Businesses Enhance Energy Efficiency and Decarbonisation

CLP Power Hong Kong Limited (CLP Power) hosted the CLP Retro-commissioning Symposium on 29 September, bringing together representatives from the Government, the business sector and industry stakeholders to exchange practical retro-commissioning (RCx) experience, development trends and energy-saving achievements. In support of the direction set out in the HKSAR Government's First Five-Year Plan to promote green, energy saving, and carbon-reduction retrofits for new and existing buildings, the Symposium aimed to foster wider adoption of RCx in Hong Kong, enhance building energy performance, and contribute to the city's low-carbon transition.

Director of Electrical & Mechanical Services Mr Raymond Poon, who officiated the event said, "The Electrical and Mechanical Services Department has long been committed to enhancing building energy efficiency and promoting the sustainable development of the existing buildings by encouraging the industry to adopt of RCx through introducing practical guidelines and the establishment of a professional framework. We are pleased to see RCx gaining increasing recognition and acceptance as an effective strategy for optimising building energy performance, improving the efficiency of building services systems and reducing carbon emissions, contributing to Hong Kong's journey towards carbon neutrality."

CLP Power Managing Director Mr Joseph Law said, "CLP Power has been actively supporting the Government's energy-saving and decarbonisation policies and working closely with the Electrical and Mechanical Services Department to promote the application of RCx across different industries. Over the years, through our training programmes, we have helped nurture RCx professionals, build industry expertise and practical experience, and enhance businesses' capabilities in improving their energy performance and strengthening their operational resilience."

CLP Power has launched the CLP Retro-commissioning Charter Programme under the CLP Community Energy Saving Fund since 2021. Through training and experience-sharing, the

Programme enhances industry awareness of RCx, nurtures professional expertise and capabilities and encourages organisations to implement RCx in their facilities. To date, CLP Power has allocated more than HK\$5 million to support the Programme, cultivating around 900 RCx practitioners from around 220 enterprises and organisations. These efforts have facilitated the implementation of more than 200 RCx projects, achieving cumulative electricity savings of over 54 million kWh, equivalent to the annual power consumption of approximately 14,000 households.

This year, CLP Power launched the CLP Retro-commissioning Audit Programme, which provides participating organisations with complimentary RCx audits and subsidies for implementing energy-saving improvement measures. More than 70 organisations have already joined the Programme, including hospitals, hotels, commercial and industrial buildings, shopping malls and data centres. For more information about the Programme or to apply, please visit the website: <https://www.clp.com.hk/zh/business/rcx-audit-programme>.

About CLP Power Hong Kong Limited

CLP Power Hong Kong Limited (CLP Power) is the Hong Kong utility subsidiary wholly owned by CLP Holdings Limited, a company listed on the Hong Kong Stock Exchange and one of the largest investor-owned power businesses in Asia. CLP Power operates a vertically integrated electricity supply business in Hong Kong, and provides a highly reliable supply of electricity and excellent customer services to more than six million people in its supply area.
